

To unpack The Reader

1. Position crate next to the final exhibiting position – crate can be used with a pallet truck or by skates on its back – do not put crate on its face or side – always travel upright or on its back

2. Remove front and back panels of the crate – using a PZ2 drill bit

3. Remove all batons holding the sculpture in position – the screws are found on the outside of the crate

4. Slide the sculpture out from the bottom with one person at the back of the crate and one person at the front. Its advisable to have a third person the steady the sculpture from the torso as you remove it from the crate.
